

WINTERLOGIC PARTNERS WITH ATE SERVICES FOR SALES AND DISTRIBUTION IN JAPAN

Roseville, MN – February 26, 2008 – WinterLogic Inc., a leading supplier of verilog fault simulation tools, today announced that it has expanded its sales efforts to Asia with an exclusive distribution agreement with ATE Services Corporation of Japan.

“We have seen demand grow for our products in Japan and I’m very excited to be teaming with ATE Services Corporation to offer customers in that region direct sales and service support,” stated Jason Campbell, president of WinterLogic. “ATE Services has developed a solid customer base during their 25 years of experience in the test industry. Our products will be a natural complement to the work that they are already doing and will allow us to grow our market in Japan.”

Rocky Kobayashi, president of ATE Services Corporation added, “WinterLogic’s functional fault simulation tools will be an excellent fit with our LSI testing solutions. By partnering with WinterLogic, we are able to give our customers a more complete solution with a tool that has been proven in the industry.”

About Z01X Fault Simulator

Based on WinterLogic’s proprietary C2 algorithm, Z01X is the fastest functional fault simulator available. Z01X is also the only verilog fault simulator that has the capability of simulating stuck-at, transition and bridge faults. Z01X supports the full verilog IEEE 1364-2001 language and accepts WGL, STIL, VCD or testbench stimulus.

About ATE Services

ATE Services Corporation of Kawasaki, Japan, founded in 1983, provides a full spectrum of application services related to today’s complex LSI testing including design-to-test software tools for all the major ATE systems, as well as signal and power integrity software tools. For more information, visit www.ate.co.jp.

About WinterLogic

Established in 2005, WinterLogic is a software product and services company that specializes in helping companies achieve their DPM targets and reduce tester time. We have special expertise in high-speed fault simulators and fault management environments for Verilog designs. Our unique technologies dramatically improve the performance of fault simulation. Our proprietary expert test system uses “testability analysis” to provide optimum test ordering, eliminate redundant tests and report on uncovered areas of the design before fault simulation begins.
